We pride ourselves in designing unobtrusive, cost-effective, reliable and above all, easy to operate security systems. Tailored to meet your personal security requirements and to blend with the aesthetics of your property, you may rest assured that we will provide a system that is exactly right for you.

Our systems are installed in thousands of properties throughout the UK; each of these is backed up by our 24/7 support service provided through our directly employed network of professional, courteous and security screened engineers.

Excellent service and good value for money are at the very core of our business ethos - perhaps that's why we remain the UK's leading independently owned electronic fire and security business - call us today, you won't be disappointed.

We design, install, maintain and commission systems for a wide range of customers. We pay particular attention to evaluating the overall fire risk and the likely effects of a fire on both the occupants and the premises. We carefully design our systems with these factors very much in mind. We are also highly experienced in designing systems to minimise their visual impact on their surroundings; a particularly important consideration when designing protection systems for historic and architect designed properties. Another area of particular expertise is the implementation of fire detection and suppression systems for computer rooms & data centres.

Specialist design, installation, testing and commissioning of fire alarms and fire suppression systems nationwide via our 24/7 service team. Unrivalled service and support from the UK's leading independently owned electronic fire and security business.

SWIFTSAFYRE SYSTEMS, THE EXCLUSIVE UK DISTRIBUTOR FOR

FACIT DATA SYSTEMS

in-store retail analytics

Our suite of in-store retail analytics solutions provides you with easy-to-understand insights about your customers.

Facit HeatMap tracks where people go once they enter your store. Easy to implement, you'll be able to measure the effectiveness of marketing and point of sale (POS) initiatives, identify store 'hot spots' and 'dead zones' and increase conversion rates.

Our QueueManager solution helps you to improve customer service and loyalty whilst Facit PeopleCounter lets you effectively manage staff resource to match footfall.

what makes us different?

No additional camera hardware required

Uses existing analogue, IP or hybrid video surveillance equipment

Simple plug and play 'box' solution

Rack-mounted hardware integrates into existing NVRs/DVRs

Custom reporting through an easy-to-use interface

Provides real time, as well as scheduled, reporting

Consultancy and installation

We provide full consultancy, installation and support

Proven

We have a growing portfolio of large multi-national retailers and supermarkets
