- **Police & insurance approved**

WORLD CLASS protection systems
from your LOCAL security company

The Swift Security Solution

Normally installed in a single day, the system comprises the following equipment and features:

- All of our systems are purpose designed to provide exactly the correct protection for you and your premises rather than the all too frequently used 'one size fits all' package offered by other alarm companies
- Discreet, simple digital code operated central control point, usually located close to either the front or rear entrance doors.
- Two external Swift Alarm housings, normally situated at high level on both the front and rear elevations of the property.
- High power internal alarm warning siren, to rapidly clear intruders out of the protected premises.
- Twenty-four hour security monitoring via our dedicated alarm receiving centre, enabling us to take immediate action to alert pre-agreed keyholders (and when required, the emergency services) in the event of an alarm activation.
- Protection provided by a carefully designed network of high integrity, false alarm resistant, wire-free movement detectors working together with door and window sensors to protect all vulnerable areas.
- Twenty-four hour personal attack alarm facility, providing rapid communication with our alarm receiving centre in the event of an emergency.
- Part set and night set facilities, enabling your system to be partially set with the premises occupied.
- Installed by our own dedicated, professionally trained, security screened engineering staff.
- 24/7 support provided by our experienced customer care and engineering teams.

All from the UK's leading privately owned electronic security systems specialist ... Swift Alarms Group
